# Request Duty Schedule Module

## *Octalarm*-TOUCH I *Octalarm*-TOUCH PRO

The duty schedule module is an additional licence for the Octalarm-Touch and the Octalarm-Touch Pro. With this module, you can set alternating fault services for a longer period.

Making the licence available on **diallers in the field** is done via a software update. This requires the dialler to be connected to the internet AND linked to the end customer's company account in the portal. The licence is then manually activated. Releasing the licence is done at a predetermined date and time so that the module is available when the installer is on site.

For new diallers with a duty schedule module, the licence is activated upon delivery. In this case, this application form does not need to be completed.

### ✓ Installer

company name:

reference/purchase number:

### ✓ End customer

company name:

place of business:

serial number Touch | Pro: 0000 - 0000

### ✓ Installatie

day of installation: dd - mm - jjjj

time of installation: uu:mm

### ✓ Note

To make good use of the duty roster module, we **strongly recommend reading the** manual **carefully and making a backup of the current settings in advance**. The best way to start using the module is to follow the order of the manual when setting up the menus.
